TeethXpress®

Clinical Techniques & Business Approach for Full Arch Immediate Treatment

Are you clinically prepared to satisfy the increasing patient demand for full-arch fixed implant prostheses on the day of surgery? In 2005, the over-65 population reached 43 million; by 2025, this group will escalate to 80 million, bringing along with it an increasing number of edentulous and partially edentulous patients. When proven clinical techniques are applied, immediate occlusal loading has a documented success rate of over 95 percent¹.

Join us for this 4-hour CE training course on TeethXpress Full-Arch Immediate-Load, learning treatment planning and surgical techniques that will help these patients plus marketing training on how to attract and influence ideal candidates for this procedure. Experienced TeethXpress course faculty will share their time-proven methods to build a successful, profitable full-arch practice, including:

- an introduction to the TeethXpress method of immediate fixed conversion
- how to identify and attract a consistent stream of TeethXpress cases in your practice
- how to plant seeds for short and long-term case acceptance with existing patients
- best practices for applying a team methodology with the surgical specialist, restorative doctor and the laboratory

For best results, it is strongly recommended that surgical specialists and referring dental colleagues attend as a team in addition to each practice bringing two key team members who are involved with speaking to your patients about dental implants.

Audience: Surgical specialists and referral dental colleagues plus max of 2 team members.

Dr. Andrew Ferrier Prosthodontist

Dr. Andrew Ferrier earned his dental degree from UCLA and completed the three year Prosthodontic Residency Program at UCSF. For the past 8 years,

he has treated patients with full arch immediate load treatment concepts in his private practice and for a dental implant center. Dr. Ferrier serves as the staff prosthodontist for the Head and Neck surgery department of Kaiser Hospital in Oakland. He has completed over 1,000 arches and conducted thousands of maintenance visits and patient consultations. Dr. Ferrier has held a position of assistant clinical professor at UCSF. He lectures internationally on a broad variety of topics including implants, CEREC, and dental practice management.

Dr. Arshiya Sharafi Oral & Maxillofacial Surgeon

Dr. Sharafi attained his dental degree at the University of Maryland Dental School and finished his Oral and Maxillofacial

Surgery training at the University of Maryland Medical Center and R. Adam Cowley Shock Trauma Center. He has trained extensively in dentoalveolar, orthognathic, maxillofacial trauma, and facial cosmetic surgeries as well as dental implants, reconstructive dental implantology, and benign head and neck pathology. He is one of a handful of Oral and Maxillofacial Surgeons in California who holds the California Cosmetic Surgery License. Dr. Sharafi has successfully performed over 2,000 full arch immediate load procedures in his private practice and for a dental implant center, and lectures internationally on a broad variety of topics including implants, full arch reconstruction and bone grafting.
