L-PRF[®]: Techniques & Applications for Dental Implant Cases

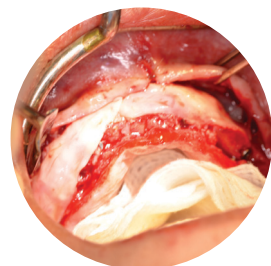

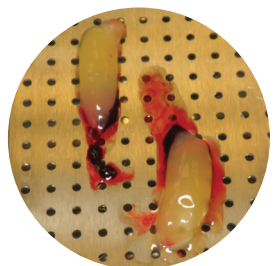

FRIDAY, APRIL 5, 2019 | **ARSHIYA SHARAFI, DDS**

**BIOHORIZONS
TRAINING CENTER
SAN DIEGO, CA**

L-PRF®: Techniques & Applications for Dental Implant Cases

This one-day course is designed for general practitioners placing dental implants and specialists that are interested in enhancing their bone grafting techniques. Leukocyte- and Platelet-Rich Fibrin (L-PRF®) is an outstanding source of autogenous fibrin mesh used to enhance healing in patients requiring grafting procedures. L-PRF is a resilient and pliable material, created from the patient's own blood. It is easy to manipulate and suture, can be trimmed to size, and is an ideal carrier for bone graft material. Uses for the material include bulking graft material, replacing graft material, using it as a barrier membrane, placing it in extractions sites for increased healing, and using it in guided tissue regeneration procedures. It is also ideal for extraction/immediate placement cases.

In this course, you will learn the science behind L-PRF and how to incorporate it into your clinical practice. The hands-on training portion will teach you how to create the L-PRF membrane/plugs and L-PRF block/sticky bone products.

Arshiya Sharafi, DDS
Oral Surgeon

FRIDAY, APRIL 5, 2019
7:30am-8:00am Registration
8:00am-4:00pm Lecture
Continental breakfast & lunch provided
