

Case Selection and Preparing for Implants

presented by Dr. Ulpee Darbar

COURSE DESCRIPTION

Learn the principles of case selection in relation to implant treatment. This course will cover contraindications to implant treatment, preoperative case preparation with an emphasis on the steps that should be followed to ensure optimal treatment outcomes for tooth replacement with dental implants. Participants will learn a stepwise approach to planning a case and take part in an interactive discussion on case selection and factors to consider during this process.

LEARNING OUTCOMES

At the end of the course the delegate will:

- Be aware of the importance of case selection in implant treatment
- Understand the indications and contraindications to implant treatment
- Understand the importance of preoperative case preparation when planning for implant treatment
- Be aware of the factors that affect outcome
- Have an awareness of factors that need to be considered when planning for implant treatment
