

# introducing MinerOss<sup>®</sup> XP

MinerOss XP is a highly porous anorganic porcine bone mineral matrix designed for hard tissue grafting applications. Increased porosity allows for optimal osteoconductivity and adequate space for new bone deposition.

SEM at 25x

SEM at 75x

## applications include

- ridge and sinus augmentation
- extraction socket grafting
- infrabony periodontal defects
- grafting for implant placement

# containment is key

Choose from an assortment of membranes or wound dressings, each with unique handling characteristics for graft containment applications:

## Mem-Lok® Pliable

- highly purified porcine collagen
- strong, conformable barrier membrane

## Mem-Lok® Resorbable Collagen Membrane (RCM)

- highly purified bovine collagen
- increased resorption period to ensure optimal regeneration

## BioPlug & BioStrip

- bovine collagen wound dressings
- designed to absorb blood or fluids
